

Poor Sanitation

Of all the people in the world, 39.8% of us do not have access to basic sanitation. This means living within walking distance of private or shared (not public) latrines or toilets that effectively prevent human and animal contact with excreta.

In Indonesia 98 million people, or 45% of the population, do not have access to good latrines. More people in Indonesia live without access to good toilets than in the whole of South America. Of the South American population, 22% live without good sanitation.

In Southern Asia and Central Africa, 65% of people live without access to basic sanitation.

Territory size shows the proportion of all people without access to basic sanitation (toilets) that live there.

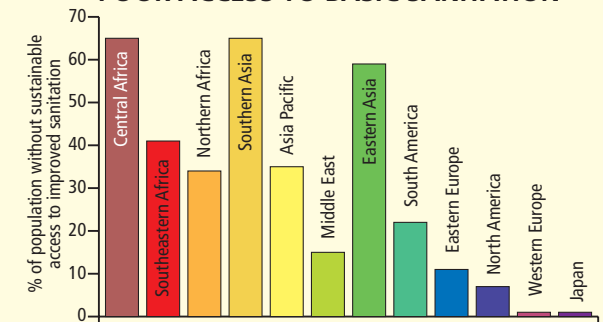

Land area

LEAST AND BETTER ACCESS TO BASIC SANITATION

Rank	Territory	Value	Rank	Territory	Value
1	Rwanda	92	141	Antigua & Barbuda	5
2	Ethiopia	88	142	St Vincent & The Grenadines	4
3	Eritrea	87	142	Thailand	4
4	Cambodia	83	142	Chile	4
5	Niger	80	142	Saint Kitts & Nevis	4
6	Dem Republic Congo	79	146	Grenada	3
7	Benin	77	147	Libyan Arab Jamahiriya	3
8	Central African Republic	75	148	Comoros	2
9	India	72	148	Egypt	2
9	Haiti	72	148	Cuba	2

percentage of people without sustainable access to improved sanitation 2000/02*

POOR ACCESS TO BASIC SANITATION

Technical notes

- Data are from the United Nations Development Programme's 2004 Human Development Report.
- *In 50 territories fewer than 2% of people did not have access to improved sanitation.
- See website for further information.

“... none of us should tolerate a world in which over 1 million children are, in a perversely literal sense, dying for a glass of water and a toilet.”

Kevin Watkins, 2006
