

# Crude Petroleum Exports

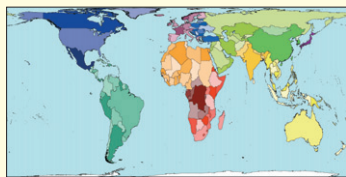

Territories in the Middle East export 58% of all crude petroleum. Saudi Arabia exports over twice the US dollar value of any other territory, measured in net terms. The United Arab Emirates has the highest per person export earnings from crude petroleum.

Other important exporters of crude petroleum are Norway, Venezuela, Nigeria and Mexico. Some regions have no territories with net crude petroleum exports: these are Southeastern Africa, Southern Asia and Japan.

Exports of crude petroleum account for 5.3% of spending on all exports.

Territory size shows the proportion of worldwide net exports of crude petroleum (in US\$) that come from there. Net exports are exports minus imports. When imports are larger than exports the territory is not shown.

*“The cost of getting oil out of the ground is going up, the amount of water in it is increasing, and there’s less and less of the really good oil down there. All of this is forcing the prices up.”*
