

# Cereal Exports

Cereals include wheat, rice, barley and maize (sometimes called corn). Cereals provide the main carbohydrate component of our diets. The United States, France and Australia are the three largest net exporters of cereals. Rich territories make the most money per person from net cereal exports.

No region dominates the map of cereal exports. At least one territory in each region has net exports. Nevertheless Africa, the Middle East, Eastern Asia, South America and Japan, as regions, have net cereal imports. This suggests that the net exporting territories within these regions do not meet regional demand.

Territory size shows the proportion of worldwide net exports of cereals (in US\$) that come from there. Net exports are exports minus imports. When imports are larger than exports the territory is not shown.

Land area

## MOST AND LEAST US\$ OF NET CEREAL EXPORTS

Rank	Territory	Value	Rank	Territory	Value
1	Australia	158	34	Russian Federation	4.34
2	Ireland	84	35	Bosnia Herzegovina	4.22
3	Canada	73	36	Pakistan	3.92
4	Denmark	70	37	Slovakia	2.30
5	France	61	38	Paraguay	2.21
6	Argentina	61	39	Myanmar	1.77
7	Uruguay	40	40	India	1.61
8	Belgium	37	41	China	0.97
9	Guyana	35	42	Czech Republic	0.87
10	Hungary	33	43	Romania	0.44

annual US\$ worth of net cereal exports per person living in that territory\*

## REGIONAL NET CEREAL EXPORTS

### Technical notes

- Data source: United Nations Conference on Trade and Development, 2002.
- \*There were no net cereal exports recorded for 157 territories.
- Cereals include wheat, rice, barley and maize. This map shows both milled (flour) and unmilled cereals.
- See website for further information.

*“Lao food is traditionally eaten with sticky rice, with the fingers. In the countryside, people will all eat family style, sitting on the floor, sharing a few dishes.”*
